

HTC - the Innovators, not the imitators!

HTC DCS Hybrid Series

HTC launches the new DCS Hybrid™ series. DCS Hybrid™ is the problem solver for the stone floor renovation industry.

The DCS Hybrid™ system gives new life to damaged and heavily worn natural stone and terrazzo floors. Easy to use and environmentally friendly, the DCS Hybrid™ gives you an opportunity to remove stains, scratches and “orange peel” using only ordinary cleaning machines and water. Refurbish your floor instead of replacing it!

DCS Hybrid™ Black is the most coarse segment of these new tools. It removes minor scoring, lippage, excessive wear and staining. DCS Hybrid™ Red removes scratches, wear and staining. DCS Hybrid™ Red prepare the floor for further improvement with HTC Twister™.

- Better grinding performance
- Improved microscratch pattern
- Extended lifespan - at least twice the old DCS Hybrid
- New softer plastic holder makes it possible to place segments back into holders if they should come out due to excessive lippage or screws.

The new DCS Hybrid™ series.

Usage

Best effects are achieved on a heavy single scrubber (>45 kg). If used with an auto scrubber it must have adequate down pressure (>60 kg) and drive no faster than 2 – 3 pmh.

Water is important (~1dl / sqm) in order to have the slurry easy to remove with a wet vacuum or a scrubber dryer. Add more water if you see that the slurry get too thick.

Apply water during the first pass and work in the same water until you change color of the tool, or work with suction all the time. Rinse DCS Hybrid pad between each color.

On a smooth surface it can take some time before the tool opens and starts to cut. You can speed this process up by using it on a rougher surface first.

Choose DCS Hybrid™ depending on the floors starting condition.

Poor condition	 DCS Hybrid Black	 DCS Hybrid Red	 Twister White	 Twister Yellow	 Twister Green
Orange peel* or small scratches		 DCS Hybrid Red	 Twister White	 Twister Yellow	 Twister Green

*The "orange peel" effect occurs when the embedded aggregate in the floor becomes increasingly exposed as the surrounding concrete matrix wears at a faster rate during the process of cleaning/maintenance. This uneven wear creates a rippled surface on the polished floor, similar to the surface of an orange peel.

The DCS system

The DCS Hybrid™ tools consist of three different items; the pad holder, the DCS pad and the DCS segments. The pads are sold in pairs and the holders individually. They are available in the following sizes: 13, 14, 15, 16, 17, 18, 20 and 21 inches. The segments are sold in boxes containing six segments.
